

Wall Mounted Muster Point

Column Mounted Muster Point

The Muster Point is a bespoke piece of hardware that is used as a focal point for mustering staff in the event of an emergency evacuation of a building or site. The Muster Point incorporates readers for the Client's Electronic Access Control system (can be a Morley system or to suit Client's existing system) that allow the staff to register their attendance at the Muster Point using their normal entry cards or tokens.

The Muster point can be supplied in wall mounted or column mounted form and features;-

- LED lighting for signage board and surrounding area
- Vandal Resistant housing for independent power supply, Morley PanelProx Reader, buzzer and indicator lamps, telephone (optional).
- Manufactured from powder coated Stainless Steel, finish colour to suit Client requirements.

A self-contained power supply ensures that the Muster Point is not affected by loss of mains power to the building or site during an emergency.

On large sites, many Muster Points can be networked together and fed back to a central control station providing that the EAC supports the additional inputs.

In all cases, the use of the Muster Point(s) in conjunction with an EAC system allow the Client to establish the presence and whereabouts of all personnel on site during an emergency situation.
